

## SwissPiranha RT120

### SwissPiranha RT - the very light full-strength tent peg

Engineered in Switzerland and made of high-performance PiranhaNT, the SwissPiranha RT120 tent peg offers many serious advantages compared to conventional stakes: lightweight, shock-resistant and super-safe! The pointed shape allows easy driving into the ground, while the x-beam profile shaft with rugged saw teeth penetrates and holds in a wide range of soil conditions. The flat head maximizes strength and holding power in all conditions by compressing the soil underneath. In addition, its flat and soft-edged design limits fall and the risk of serious injuries. Notches inside the head can be used for attaching the guy lines in different ways and ensure best anchoring - even in heavy wind. SwissPiranha stakes do not twist and can be driven straight into the ground by using a foot, a hammer, back of an axe or a stone. They are no sharp edges that could damage the tent fabric.

Environmentalists can lie back and relax: Production and recycling of SwissPiranha tent pegs require up to 13 times less energy than aluminium stakes. In addition, a bent SwissPiranha peg can be easily returned to its original shape by adding it to the oven for 5 minutes at 160°C. Cleaning is very easy as they can even be cleaned in the dishwasher. In any case, SwissPiranha pegs are great lightweight, all-purpose tent stakes.

### Ultralight & versatile.

The SwissPiranha RT120 is a smaller, lighter version of our popular RT150, and saves weight while offering the reliable performance of the original. Very impressive weight to length ratio by 120mm / 4.72" in total length and a weight of 5.9g / 0.21oz!

Sold individually and as a kit of ten tent stakes.
