

## SwissPiranha SSA Snow and Sand Anchor

### Lightest solid snow anchor on the market!

This new innovative snow anchor is made from durable, high-flexible PiranhaXT and is ideal for creating a solid anchor point in soft ground like sand or snow. The 200mm / 7.87" long SSA offers more holding power than similar-size aluminium anchors but with half the weight (only 43g / 1.52oz - less than any comparable anchors made out of metal). The high-performance plastic material brings the advantage of non-heating by the sun under the snow like common aluminium flaps do - and stays even at a low temperature (-50°C) elastic. Its specific geometry and design make it very easy to insert the anchor into the snow. When positioned, it has tremendous high pull-out strength.

Environmentalists can lie back and relax: Production and recycling of PiranhaXT plastic requires up to 13 times less energy than common aluminium anchors. Engineered and produced in Switzerland.

Nominated "Simple and effective" is the judges' verdict. "Small, lightweight and versatile. These are the unique selling points of the SwissPiranha snow and sand tent anchor! "

Sold as a kit of six anchors, in a stuff sack with printed-on instructions.
